THIS APPLICATION IS SUBJECT TO WITHDRAWAL FROM ISSUE AT THE INITIATIVE OF THE OFFICE OR UPON PETITION BY THE APPLICANT. SEE 37 CFR 1.313 AND MPEP 1308.

THE ISSUE FEE AND PUBLICATION FEE (IF REQUIRED) MUST BE PAID WITHIN THREE MONTHS FROM THE MAILING DATE OF THIS NOTICE OR THIS APPLICATION SHALL BE REGARDED AS ABANDONED. THIS STATUTORY PERIOD CANNOT BE EXTENDED. SEE 35 U.S.C. 151. THE ISSUE FEE DUE INDICATED ABOVE DOES NOT REFLECT A CREDIT FOR ANY PREVIOUSLY PAID ISSUE FEE IN THIS APPLICATION. HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Dan Ryan on 6/19/2008.

The application has been amended as follows:

CLAIMS

29. (amended) A method for burning a low-calorie combustion gas, comprising:
swirling a combustion air;
injecting the low-calorie combustion gas into the swirling combustion air through a plurality of elongated inlet openings which are disposed parallel to the flow direction of the combustion air;
mixing the low-calorie combustion gas and the swirling combustion air; and
burning the low-calorie combustion gas and the combustion air mixture.

Claim 30, at the end of the claim a period --. has been inserted.

REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance: the prior art of record do not fairly teach in permissible combination "A premix burner for burning a

low-calorie combustion gas, comprising: a pilot burner arranged coaxially with a burner axis; a premix air duct defined by an inner duct wall and an outer duct wall arranged coaxially along the burner axis and encircling the pilot burner, and provides combustion air to the burner; a helical device arranged in the premix air duct; an injection device arranged downstream from the helical device that injects the low-calorie combustion gas into the premix air duct, *the injection device defining a plurality of combustion gas inlet openings, each inlet opening having: a pair of longitudinal extension walls arranged essentially parallel to a longitudinal axis defined by a flow direction of the combustion air, and a pair of transverse extension walls arranged perpendicular to the longitudinal axis, wherein the longitudinal extension walls are greater in length than the transverse extension walls*" nor "A gas turbine engine, comprising: an inlet manifold that inlets a air flow; a compressor connected to the inlet manifold that receives the inlet air flow and compresses the air to provide a combustion air flow; an annular combustion chamber that receives the combustion air flow and configured to combust a low-calorie fuel and provide a hot combustion flow, containing: a pilot burner arranged coaxially with a burner axis; a premix air duct defined by an inner duct wall and an outer duct wall arranged coaxially along the burner axis and encircling the pilot burner, and provides the combustion air flow to a premix burner; a helical device arranged in the premix air duct; an injection device arranged downstream from the helical device that injects the low-calorie combustion gas into the premix air duct, *the injection device defining a plurality of combustion gas inlet openings, each inlet opening having: a pair of longitudinal*

extension walls arranged essentially parallel to a longitudinal axis defined by a flow direction of the combustion air, and a pair of transverse extension walls arranged perpendicular to the longitudinal axis, wherein the longitudinal extension walls are greater in length than the transverse extension walls; and a turbine that receives and expands the hot combustion flow" nor "A method for burning a low-calorie combustion gas, comprising: swirling a combustion air; injecting the low-calorie combustion gas into the swirling combustion air through a plurality of elongated inlet openings which are disposed parallel to the flow direction of the combustion air; mixing the low-calorie combustion gas and the swirling combustion air; and burning the low-calorie combustion gas and the combustion air mixture." For the method claims 5,673,551 teach injecting the low-calorie combustion gas via 9a where the combustion air is swirled at 10.

However, the swirling combustion air from 10 has an axial component to the flow and the openings are not elongated nor are nor are the disposed parallel to the direction of the flow of the combustion air. Willis et al teach elongated openings 67 for air in a premixer (see e.g. Fig. 16), but these are for air and they are not *disposed parallel to the flow direction of the [swirling] combustion air* nor does *each inlet opening having: a pair of longitudinal extension walls arranged essentially parallel to a longitudinal axis defined by a flow direction of the combustion air, and a pair of transverse extension walls arranged perpendicular to the longitudinal axis, wherein the longitudinal extension walls are greater in length than the transverse extension walls; and a turbine that receives and expands the hot combustion flow*. Joshi (5,680,766) teaches air injection openings 80

which are arranged downstream of a swirling combustion air where the plurality of openings 80 are aligned with the direction of the airflow 81(col. 7, lines 24+) but the openings are again for air, nor do they have the above italicized text.

2. Note that the basic configuration used in the apparatus claims is well known in the prior art, and the above italicized text is not fairly taught in permissible combination with the rest of the claim limitations.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
